Question **1**

Correct

The name and mileage of certain cars is passed as the input. The format is CARNAME@MILEAGE and the input is as a single line, with each car information separated by a space. The program must print the car with the lowest mileage. (Assume no two cars will have the lowest mileage)

Input Format:

The first line contains the CARNAME@MILEAGE separated by a space.

Output Format:

The first line contains the name of the car with the lowest mileage.

Boundary Conditions:

The length of the input string is between 4 to 10000.
The length of the car name is from 1 to 50.

Example Input/Output 1:

Input:

Zantro@16.15 Zity@12.5 Gamry@9.8

Output:

Gamry

For example:

Input	Result
Zantro@16.15 Zity@12.5 Gamry@9.8	Gamry

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
#include<string.h>
#include<stdlib.h>
int main(){
char input[10000];
fgets(input, sizeof(input), stdin);
```

```
7  char*token=strtok(input, " ");
8  char car[100], minCar[100];
9  float mileage, minMileage=999999.0;
10 while(token!=NULL){
11 sscanf(token, "%[^@]@%f",car,&mileage);
12 if(mileage<minMileage){
13 minMileage=mileage;
14 strcpy(minCar, car);
15 }
16 token=strtok(NULL, " ");
17 }
18 printf("%s\n", minCar);
19 return 0;
20 }
```

	Input	Expected	Got	
✓	Zantro@16.15 Zity@12.5 Gamry@9.8	Gamry	Gamry	✓

Passed all tests! ✓

Question **2**

Correct

A certain number of people attended a meeting which was to begin at 10:00 am on a given day. The arrival time in HH:MM format of those who attended the meeting is passed as the input in a single line, with each arrival time by a space. The program must print the count of people who came late (after 10:00 am) to the meeting.

Input Format:

The first line contains the arrival time separated by a space.

Output Format:

The first line contains the count of late comers.

Boundary Conditions:

The length of the input string is between 4 to 10000.
The time HH:MM will be in 24 hour format (HH is hours and MM is minutes).

Example Input/Output 1:

Input:

10:00 9:55 10:02 9:45 11:00

Output:

2

Explanation:

The 2 people were those who came at 10:02 and 11:00

For example:

Input	Result
`10:00 9:55 10:02 9:45 11:00`	`2`

Answer: (penalty regime: 0 %)

```c
#include<stdio.h>
#include<string.h>
int main(){
    char input[10000];
    fgets(input, sizeof(input),stdin);
    char*token;
    int hour,min;
    int count=0;
    token=strtok(input, " ");
    do{
        sscanf(token, "%d:%d",&hour,&min);
        if(hour>10||(hour==10&&min>0)){
            count++;
        }
        token=strtok(NULL, " ");
    }while(token!=NULL);
    printf("%d\n",count);
    return 0;
}

```

	Input	Expected	Got	
✓	10:00 9:55 10:02 9:45 11:00	2	2	✓

Passed all tests! ✓

Question **3**

Correct

A single line consisting of a set of integers, each separated by space is passed as input to the program. The program must print the sum of all the integers present.

Input Format:

The first line contains the integer values (Each separated by a space)

Output Format:

The first line contains the sum of all the integers.

Boundary Conditions:

The length of the input string is between 3 to 10000
The value of the integer values will be from -99999 to 99999

Example Input/Output 1:

Input:

100 -99 98 5

Output:

104

Example Input/Output 2:

Input:

100 200 -300 500 -450 -50

Output:

0

For example:

Input	Result
100 -99 98 5	104
100 200 -300 500 -450 -50	0

Answer: (penalty regime: 0 %)

```c
#include<stdio.h>
#include<string.h>
#include<stdlib.h>
int main(){
    char input[10000];
    fgets(input,sizeof(input),stdin);
    char*token;
    int num, sum=0;
    token=strtok(input," ");
    do{
        if(token==NULL)
        break;
        num=atoi(token);
        sum+=num;
        token=strtok(NULL," ");
    }while(token!=NULL);
    printf("%d\n",sum);
    return 0;
}
```

	Input	Expected	Got	
✓	100 -99 98 5	104	104	✓
✓	100 200 -300 500 -450 -50	0	0	✓
